Subject: RE: PFAS Update

Thanks. That's what I thought and what I communicated to Laura yesterday. I'll update the tracking system entry with that bit of info.

Thanks for this Connor. I was unable to get these in the tracking system when you sent them because I've been at [Nonresponsive based on revised scope] since Thursday 9/24 when you sent it. Already uploaded a couple of them to the tracking system this morning. Question about [Nonresponsive based on revised scope]

Subject: PFAS Update

Joe,

We spoke about providing an update for the PFAS database. Let me know if you have any changes please.

Nonresponsive based on revised scope

Blades Groundwater:

The Blades Groundwater site is listed as Final on the National Priorities List. PFAS has been shown to continually be detected at 3 municipal and 8 residential wells above HA. PFAS contamination was identified in the groundwater surrounding the two electroplating facilities. The Town of Blades continues to sample and manage the carbon units installed on the three municipal wells. Post-treatment sampling results continue to show PFAS below the HAL post treatment. During the SI/HRS, EPA installed and sampled; 19 new wells, 18 existing wells, 1 observation, 3 public wells owned by the town of Blades, and 9 co-located surface water and sediment samples. EPA's Remedial Site team, Site Assessment, and EPA's remedial contractor AECOM continue joint update meetings discussing plans forward for the Remedial Investigation. The site was listed to the NPL on September 3, 2020. EPA's Remedial program will be providing future updates for the site while the RI is ongoing.
